Living Colors® Fluorescent protein antibodies

A wide selection of antibodies to detect fluorescent proteins including monoclonal and polyclonal antibodies.

HIGH SPECIFICITY

Validated for strong and specific binding

VERSATILE APPLICATION

Suitable for WB, IF, IP and more

RELIABLE PERFORMANCE

Consistent and reproducible results

WIDE SELECTION

Monoclonal and polyclonal options

WB = Western Blot | IF = Immunofluorescence | IP = Immunoprecipitation

KEY BENEFITS

- Exceptional Specificity: Rigorously tested to ensure they recognise the native structure of fluorescent proteins like AcGFP1, mCherry, and DsRed without cross-reactivity.
- High Sensitivity: Designed for low-level expression detection, allowing to visualise tagged proteins that might otherwise be invisible with lower-grade antibodies.
- Validated for Diverse Applications: Optimised for a wide range of demanding techniques, including: Western Blotting; Immunofluorescence; Immunoprecipitation; Immunocytochemistry & Immunohistochemistry
- Monoclonal and Polyclonal Options

RetroNectin Key Benefits

- Enhanced gene transfer efficiency for retroviral or lentiviral transduction of suspension cells, hematopoietic stem cells, and other hard-to-infect cell types
- Less toxicity than other commonly used transduction enhancers, including polybrene and protamine
- Fully recombinant peptide
- The efficiency of T cell (CD8+) expansion can be significantly increased in the presence of RetroNectin® reagent

AAV TRANSDUCTION SYSTEMS

Takara Bio offers a comprehensive suite of AAVpro™ Systems designed to support the entire workflow of adeno-associated virus (AAV) vector production, purification, and transduction. AAV is a popular choice for gene delivery due to its low immunogenicity, ability to infect both dividing and non-dividing cells, and long-term transgene expression.
